Professional Experience

Descartes Systems Group (Remote)

April 2024 – Present

Technical Account Manager (Post-sales/Integrations)

November 2025 – Present

- Owned post-sales technical relationships for enterprise customers, serving as the primary escalation point for TMS configuration, integrations, and operational workflows
- Diagnosed and resolved complex system and data issues across TMS platforms and third-party integrations, coordinating with Engineering and Product as needed
- Advised customers on best-practice configurations and process improvements to improve system reliability, adoption, and long-term success

Customer Support Specialist

April 2024 – November 2025

- Delivered technical support for freight brokerage clients on a TMS platform, resolving complex system and integration issues through effective case management
- Partnered with Engineering and Product to document bugs, improve platform functionality, and guide customers on best-practice usage

Desktop Support Technician | Marion ISD (Marion, TX)

May 2023 – December 2023

- Provided technical support for 200+ users, managing Windows environments, device configurations, and network connectivity
- Implemented proactive system updates and security configurations, improving operational reliability and response efficiency

Open Deck Carrier Specialist | Arrive Logistics (Austin, TX)

March 2022 – April 2023

- Managed carrier relationships and daily freight execution, developing a strong understanding of transportation workflows and broker operations.

Carrier Sales Representative | BNSF Logistics (New Braunfels, TX)

October 2018 – March 2022

- Coordinated high-volume freight movements while collaborating with carriers and customers to ensure successful shipment execution.

Projects

TMS API Sandbox

- Developed a personal TMS API sandbox to strengthen hands-on knowledge of REST APIs, transportation software, and integration architecture.
- Applied business rules and relational database design to model real-world freight workflows and better understand how enterprise logistics platforms operate.
